1. This office action, in response to the request for continued examination and the amendment filed 11/21/2007, is a non-final office action.

Continued Examination Under 37 CFR 1.114

2. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/21/2007 has been entered.

Response to Amendment

3. The previous objection to the drawings is maintained. Applicant states the claimed features are supported by the drawings but it is unclear where the ADSL system comprising the claimed components is shown in the figures. Applicant is request to point out the claimed features in the figures. Applicant states that drawings of the features are not needed for understanding of the claimed subject matter. The examiner disagrees. The pending claims recite an ADSL system comprising components. This apparatus is not shown in the figures. Therefore, the implementation of this system is not shown. Is the system implemented in software or hardware? It is unknown since the system is not disclosed in the drawings. The objection of the drawings is maintained and stated below.

4. The previous rejection of the claims under 35 U.S.C. 112, second paragraph is withdrawn. The pending claims recite a system with components.

5. Applicant's arguments with respect to claims 1-12 have been considered but are moot in view of the new ground of rejection.

Drawings

6. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the claimed system must be shown or the features canceled from the claims. No new matter should be entered:

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner,

the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

7. Claims 1-12 are rejected under 35 U.S.C. 102(a) as being anticipated by the instant application's disclosed prior art.

Regarding claims 1-12, page 2, lines 13-21 of the instant application's disclosed prior art describes an ADSL system and central office that performs spectral management. The standards incorporated by reference in the instant application's disclosed prior art further describe this system. Page 4, lines 8-20 states the ADSL system will manage the power spectral density about the POTS frequency band. Break points are stored in the system to allow the management of the power density spectrum. This system can store any plurality of break points that are desired. Specific break points of a power density spectral mask are not components of an apparatus or system.
